Subject: Fwd: UCMR 3 Approved Lab List

Greetings

Hope things are going smoothly after the PFOA/PFOS announcement.

Just passing this along in case you want to know which laboratories have been approved under UCMR.

Call if any questions
Take Care

Subject: UCMR 3 Approved Lab List

Jane:

I understand that at least one of your states (RI), possibly others, have asked for a list of the labs that were approved to support UCMR monitoring over the period of 2013-2015. Here's the link: <https://www.epa.gov/sites/production/files/2015-10/documents/lablist.pdf>.

If this is all related to PFOA/PFOS, they'll want to focus on the column for labs approved to run Method 537.

As a reminder, EPA does not require that a particular method (e.g., EPA Method 537) or particular labs (e.g., those approved to support UCMR 3) be used for monitoring outside the scope of UCMR 3 (recall that UCMR 3 monitoring officially ended 12/31/15; with the exception of delayed sampling, all monitoring should be complete by now).

States may choose to require analysis by an approved/certified/accredited lab, using a particular method, and/or using a particular method reporting limit.

Greg
